

Master Entries at MNRC Clubs in the Atlantic & East Central Regions (plus Texas) (2007, 2010 and 2011 Master National Years)

The 2011 Master National in Maryland has the potential to be the largest ever! We have decided to track the number of dogs running in master tests at MNRC clubs in the Atlantic and East Central Regions (plus Texas). These charts show a comparison of weekend hunt test entries for three distinct time periods. We compare entries for 2011 with entries from 2010 when the MN was held on the west coast, and 2007 when the MN was last held in the Atlantic Region. The Cumulative Entries chart shows the sum of entries for each month plus entries for all preceding months for that MN year. We will update these charts as data are available.
